En esta ocasión mostramos un paso a paso de como puede ser instalado XenApp 5 for Windows 2008, después de multitud de solicitudes de algunos usuarios noveles, como referencia indicaros que en artículos anteriores ya hemos podido ver como configurar Windows 2008 Enterprise Edition y dejarlo totalmente preparado para la posterior instalación de XenApp 5, en lo que sería una nueva granja de nuestra plataforma de virtualziación de aplicaciones. En este paso a paso, nos basamos en dicha guía.

Antes de iniciar el proceso, realizaremos referencias a una aserie de documentos que tendréis que tener en cuenta y que tenéis disponibles en la Knowledgebase de CTXDOM.COM, en ellos encontraréis los módulos adicionales que os van a ser necesarios para una correcta implementación.

Los documentos que tendréis que tener en cuenta son los que se indican a continuación:

Como configurar Windows 2008 Enterprise Edition Migrando a XenApp 5 Como configurar el datastore con Oracle Cómo crear y utilizar el DataStore de ORACLE con XenApp 4.5

Para iniciar el proceso de instalación de XenApp 5 for Windows 2008, será necesario disponer de nuestro servidor Windows 2008 previamente instalado y configurado, esta información podréis encontrarla en el documento " <u>Como configurar Windows 2008 Enterprise Edition</u> ".

Una vez configurado nuestro servidor procederemos a la instalación de XenApp 5, para ello utilizaremos el CD o DVD de instalación de XenApp 5 for windows 2008, arrancando el sistema de instalación "recordad que tendremos que deshabilitar el autoarranque de CD/DVD una vez finalizada la instalación".

Antes de iniciar la instalación de XenApp 5 for Windows 2008, realizaremos la instalación de .NET 3, o también podemos hacer que el Wizard lo realice de forma totalmente automática. La instalación es sencilla, una vez ejecutado el fichero de instalación se iniciará la instalación,
